

Background

Vida Artes is a comprehensive treatment facility dedicated to helping individuals enhance their interpersonal skills and connections. We offer a range of treatments designed to develop relational engagement tools, fostering a sense of mastery and self-esteem.

Values

Specializing in the treatment of neurodivergent conditions like Autism Spectrum Disorder and ADHD, as well as other psychological disorders (Depression, Anxiety, OCD, etc.) requiring multifaceted support, Vida Artes inspires individuals to embrace their neurodiversity and uniqueness. We strive to help our clients expand their sense of belonging within their communities and the broader social world.

Goals

Our goal is to create opportunities for children, adolescents, and young adults to build meaningful connections with the world around them.

EMBP™

Electromagnetic Brain Pulsing

What is it?

(EMBP™) is a new, advanced, treatment that identifies the patient's brain condition through quantitative analyses and delivers a customized, pulse-matching, electromagnetic stimulation to normalize the brain condition.

Based on double-blind clinical trials and retrospective case studies, the following pertains to individuals with ASD treated with EEG guided TMS:

72% of individuals with sleep disturbances restored their sleep pattern to normal

68% of individuals with communication difficulties, in both verbal and nonverbal characteristics, experienced improvement

75% of individuals with difficulty maintaining eye-contact experienced improved eye-contact behavior

60% of individuals with diminished learning capacity experienced improvement
